Video/Speaker Observation Form

Video Title/Speaker: Mr. Wilton

Subject summary: Mr. Wilton showed us today what he did in the process of designing and fabricating a camera for use in recording/observing surgeries. He spent months designing and improving what started as a simple thought and concept sketch, and spoke with the hospital that requested the production of the device and worked to optimize the size/weight/extension ratio of the whole thing. The device will be tested to become certified for medical use in September, then shipped off to the hospital to replace a 1940s piece of equipment that was basically jury rigged for the task.

Coollest thing you learned: Mr. Wilton didn't graduate from high school.

What you disliked: Mr. Wilton spelled "mobile" wrong once.
